Hi, Fredrick -

I wanted to let you know we are working our way through the revisions to the draft permit, as well as your thoughts in response to our comments. I managed to get a copy of the revised statistical memo to Bernie, but he is out doing fieldwork for the next few weeks, so I'm afraid I don't have any information to share with you about projected timing for talking about the RCRA groundwater monitoring portion of the permit.

Due to our severe travel budget restrictions, we won't be able to meet with you in person. I can try to set up a VTC once we're ready to talk, or we may have to rely on a good old-fashioned conference call. We can make it work, I am sure.

In the course of looking at your responses to our comments, we have further questions about the proposed vacuum system at the RCRA landfill. As it appears that system is to be installed through an engineered RCRA final cover, we wish to do a full technical review of that proposal. Please send us a copy of those portions of the Part B application, including the supporting documents describing science behind this cyanide treatment technology, engineering drawings, P&IDs, emission controls, and the CQA plan. We are particularly concerned about how this will be installed through the engineered cover in a way that maintains its integrity. Electronic copies of the documents would be fine, unless there are large construction blueprints to be copied. (There may be additional documents we will need to complete our review, I will let you know.)

We would appreciate receiving these documents as soon as possible in order to provide you with recommendations and comments in an expeditious manner.

Thanks much - christy
